

KAI CHEN

Frontend Developer

fuddleyu@gmail.com | Remote projects | Email / chat
luoy16002-svg.github.io/kai-works | GitHub / source & tests

I build React and TypeScript interfaces for data-heavy tools and product experiences, with attention to responsive layouts, failure states and handover.

TECHNICAL SKILLS

React, TypeScript, JavaScript, HTML, CSS, Web Workers, IndexedDB, CSV processing, Git, automated tests

SELECTED INDEPENDENT PROJECTS | 2026

Current

React / TypeScript / Web Workers / SVG | [Case notes & evidence](#)

- Built a React CSV workspace with worker-based parsing and queries, a virtual table, cancellation and filtered export.
- Checked 100,000 synthetic records against an independent BigInt reference; browser export was verified with Python csv and Decimal.

Relay

TypeScript / IndexedDB / Web Workers / React | [Case notes & evidence](#)

- Implemented atomic job claims, expiring leases, stale-token rejection and transactional local effects in IndexedDB.
- Recorded an Edge run recovering 1,000 jobs after worker termination and reload, with exactly 1,000 unique local effects.

HALO

React / TypeScript / Three.js / WebGL | [Case notes & evidence](#)

- Built a responsive Three.js configurator with procedural geometry, live material controls, shareable URLs, PNG and JSON export.
- Verified 900 configuration round trips, including zero brightness; added input bounds, reduced-motion behavior and a WebGL fallback.

WORKING ARRANGEMENT

I work from written briefs, share working previews, and deliver source code with setup notes.
